

Pachi Carlson

Jr. Web Developer

EXPERIENCE

Jr. Web Developer

ViviScape. | Remote | February 2020 – Present

At ViviScape I work as a web developer creating webpages for the agency clients, collaborating directly with the Designer and back-end developer. I learn new things on a daily basis while I do my best to meet the clients needs. AngularJS and Bootstrap are two skills I am learning on the job, since the company uses those frameworks often.

Front-End Developer Intern

MeToo Kit. | New York, NY | December 2019 – Present

As an intern at MeTookit, I support the team coding interfaces to display the backend data, while learning the best programming practices in a professional environment. Our most recent project is a table of content that will display all sorts of data related to Sexual Assault all over the country, divided per state. I was the first front-end hire, so I got the project started from 0 and later I taught new hires about the project and how to add to it, delegating tasks and overviewing their progress.

Professional ChildCare Provider

2012 – 2020

While I worked in a different field the last few years, I have been studying development on the side for almost 2 years and even built a few small webpages for small businesses.

Transferable skills from ChildCare to Tech:

-Patience, Problem-solving and fast thinking, Time Management, Being a team player.
